

Use Case: Civil Engineering and Survey Services

Complete Visibility and Accountability with Actsoft

A civil engineering and surveying services firm that serves public, commercial, and private clients.

Challenges

A civil engineering firm needed an easy-to-use mobile resource management solution that would allow them to locate their mobile crews, collect and retain accurate data, increase productivity, and send forms from the field to the office. Work began to suffer due to traditional manual processes and excessive paperwork, which were slowing workflows between office operations and field staff.

Solution

Actsoft's Professional Services team worked with the company to incorporate two separate forms into a single digital form, which contained pertinent information about each new job they would take on. To streamline the process even further, Our Professional Services team designed a custom report from data collected via the Wireless Forms feature on Actsoft.

Benefits

Using Actsoft, their organization now has complete visibility into their activities on the construction site. Engineers can easily attach photos to a form to complete detailed safety and compliance checklists, and track digitally where job-related activities took place. Wireless Forms eliminates loss of data and time by allowing the field crew and inspectors to send information instantly back to the office, reducing downtime, keeping workers accountable, and providing extraordinary savings. With the Actsoft dashboard, office managers can now easily analyze data in one place, giving them a whole new level of operational efficiency and enhancing their project timelines.
